R6 bumper and mesh sport grill on pre-facelift (PF)

R6 bumper and R6 sport grill with facelift (WF)

R6 FRONT BUMPER CHARACTERISTICS AT A GLANCE:

A Complete lighting options available

B RS6-like black corner mesh

C RS6-like lower center grill

All R6 bumpers require the selection of one of three light option since OEM fog lights cannot be reused.

*** Option offered with match painted only.**

D No license plate indentation option*

E RS6-like recessed corners and indentations

F Blacked out lower light area*

Stylish lower splitter enhances the dynamic stance of the R6 car. See corner lighting options on the next page.

**Short Euro profile
Clean cut yet aggressive lines**

A6 luxury cars could use a little excitement and LLTEK has several stylish upgrades available. The newest and most radical is a full front bumper called the R6! This product is both stylish and aggressive at the same time. For the North American enthusiast, LLTEK even offers the R6 bumper without European license plate indentation as an option.

The R6 full front bumper system arrives at LLTEK in pre-preparation state. Quality sanding plus primer must be applied prior to painting. These are all standard features when LLTEK provides paint service. Once prepared and painted, the bumper is truly inspiring. For these reasons LLTEK recommends (although certainly not mandatory) preparation and paint by LLTEK. Audi factory original fog lights cannot be used in the R6 bumper system and LLTEK provides 3 optional lighting programs, all far superior to the OEM fogs. When paint is optioned (price is \$222), the service includes match paint plus a second color of black paint around the corner lighting area. With paint service, LLTEK will also pre-install the lower 3 grill sections and will pre-install light brackets and the specified light system at no extra cost.

To install the R6 Euro bumper you must purchase from LLTEK a set of modified European specification A6 impact bar holders. This is a replacement bolt-on item taking only a few minutes to install. A semi-circular hole must be cut into the bar to allow the headlight washer to be positioned correctly.

R6 Rear Overlay Valance Cars which have factory OEM back-up sensors installed low in the rear bumper may have to raise the sensors or modify the rear R6 valance if ordered. At time of publication, USA and Canadian cars with back-up sensors mostly have the sensors installed high on the back bumper. Therefore no modification must be made on those cars when the sensors are high.

R6 Rear Valance Notes: The surface valance also serves as a frame for the exhaust exit pipes. For these reasons (as well as others) it is recommended the purchase of the LLTEK exhaust system as this product utilizes features for correct positioning and alignment with the R6 valance and the many different Audi A6 rear bumpers. LLTEK A6 (4B) exhaust systems come with micro adjustable hanger supports and flex joints to work correctly with the rear valance on the Audi A6 and/or the R6 overlay valance. Also, consider our hidden tip through the valance conversion program

NOTE: The R6 bumper system distributed by LLTEK has a similar look to the Audi bumper on the Audi RS6 car. However the two bumpers should not be confused as being the same as there are several major differences. The OEM RS6 bumper fits only those A6 cars with the 4.2 motor (wide body). The R6 bumper (PF and WF) fits only narrow body A6 cars utilizing completely different lighting support and positioning systems.

Therefore the R6 bumper and OEM bumper on the RS6 car are not interchangeable. The R6 bumper (Model 4.2) that does fit the 4.2 wide body A6 utilizes different lighting support and position systems, so again there are important fitting and styling differences. In addition, grill framing structure and supports are totally different. Audi factory fog lights cannot fit on any R6 bumper. There should be no confusion by any customer on these matters regarding the LLTEK supplied front R6 bumper and parts sold only by Audi and its authorized dealer network. Side skirts and rear valances for narrow body A6 are not intended and do not fit the 4.2 wide body A6 car. Side skirts that do fit on the 4.2 Audi are not the same as those appearing on the RS6 car.

LLTEK STYLING PROGRAM FOR A6 (4B) CARS

Styling for the A6 car has never been as plentiful as for the A4 models. Still, there are several creative ways to “individualize and personalize” the A6 right up to and including the RS6. Styling components for the A6 series tend to be more subtle in design, yet some of our product is major “forward thinking”.

LLTEK also carries a series of suspension, exhaust and braking upgrades as well. The LLTEK wheel/tire program continues the tradition of individualization at a very affordable price level.

STYLING AND PERFORMANCE PROGRAM FOR THE AUDI A6 SERIES

LLTEK offers various styling upgrades for the pre-facelift, facelift and 4.2 variants. Look for lip spoilers for all models, sport grills for pre-facelift (PF) and with facelift (WF), headlight upgrades, tail light upgrades for sedan or Avant. For the back of the car, look at three different stylized trunk spoilers (sedan). For the Avant, look for the mid spoiler and upper roof spoiler. On the performance side, look for the through the valance rear exhaust program. There are several free flow air intake systems. See our wheel section and suspension section for handling upgrades. Creature comforts haven't been overlooked. There are floor mat systems, trunk liners and leather covered cellphone mounts. You can now convert your factory 2.8, 2.7T, 3.0 and 4.2 tips to a through the valance look. Study the A6 pricing section to determine the appropriate components for your car.

4.2 and 4.2S air intakes and lip spoilers revolutionize the look.

Upper roof spoiler and mid level spoiler plus Avant tail light covers on board! (pictures A, B, C, D)

Lip spoilers designed for the Audi S6/A6 4.2, blending the front end with factory flared fenders.

Doug from Washington State had this to say about his new A6 4.2 **Lower Lip Spoilers...**
 "I just installed the A6 4.2 painted lip spoilers from LLTEK. **They look fantastic!** The paint was perfect. The installation was a breeze. The whole appearance of my car has changed into a menacing and serious car, suggesting it has a wider and lower stance. Every A6 4.2 and S6 car must have these spoilers!
 My next order will be for those new 4.2 air scoops. I can hardly wait!"

A6 lip spoilers redefine front end design. Specific models for each A6 (4B) variant. See pricing for details.

- Lifetime manufacturer's warranty
- Not overly loud
- Rich deep tone

Complete A6 exhaust details, pricing and notes can be found on page 28-31.

TRIM SET

Option (insert) for 2.8 or 2.7T 1998-2000 with no back-up sensors. Choice of black or silver paint option (code FF). Other systems supplied with flexible edge trim in black or silver at no charge. Note: 2.8/2.7T pre-facelift and early 4.2 require exit holes in each side. For facelift 3.0/2.7T and latter 4.2 and all 4.2 S/RS, no cutting is required.

SPECIAL NOTE FOR A6: LLTEK exhaust systems are tuned for optimum performance. When installed on an A6 or Avant (2.8-3.0) equipped with Tiptronic®, the system may sound "boomy" at low rpm. This resonance effect is caused by a "shift" program optimized for fuel economy forcing upshift to a higher gear quickly producing low engine rpm. To reduce this effect, it is advised to switch to Tiptronic® mode to keep the engine at higher rpm. Resonance will dissipate.

Smoke or clear tail lamps for all A6 sedans (incl. RS6)

Base solution - Leather

Electronic communication devices, i.e. cell-phone, PDA, MP3 or even GPS, are part of our daily activities and need a convenient home in your car. This custom leather base fastens to the side of the A6 center console providing a flat stable platform. Simply use the manufacturer's cell-phone cradle or a magnetic button to secure the device. Or, use the free included velcro disks.

VELCRO® DISCS INCLUDED
with holder

For A6, S6 and RS6

All season trunk liner A6/Avant

High sides control soiling of the factory carpet beneath. Edges are flexible allowing oversize cargo (skis, bikes, surfboards, golf bags, etc.). The center section is "anti-slip" to prevent excessive cargo movement. To clean, simply remove and hose down. Now when you toss in dirty boots, grungy cans of paint or a muddy mountain bike, you will have full protection and security. Specify A6 sedan or Avant when ordering.

Anti-slip center section reduces excessive cargo movement

Roof rack system for A6

Don't let the luxurious status of your car detract you from your active lifestyle. Carry mountain bikes, skis, kayaks wherever you go with a top quality roof-mounted carrying system. LLTEK stocks a wide inventory of technical roof rack systems for the Audi A6 sedan or Avant. Refer to the roof rack section for more detailed information (pages 38-39).

Crossbars available in silver or black
Sedan bars in black only

Shown above: The new Foot System for Avant (FSA) with low profile side rail attachment. Fully lockable. Also available for A4/S4 Avant.

All season M&S floor mats • A6

Originally M & S stood for "Mud and Snow". However, these European designed mats are so attractive and functional we consistently ship sets to sun belt areas! The mats for the A6(4B) are designed specifically to fit extra tight in the floorpan. These are custom design mats for the narrow body A6 car (on 4.2 including S6/RS6, the front passenger mat does not fit well due to the oversize transmission tunnel but it can work if you agree to accept less than 100% fit perfection).

Each front mat is oversized with elevated protective edges on the outside to better control water, mud, dirt or snow. The inside edge is raised and rides several extra inches up the side of the transmission console.

Utilizing synthetic tight weave low-pile industrial grade carpet, the surface pile is designed to quickly wick moisture away. A thick heavy-duty driver heel pad is electronically bonded to the upper carpet surface for extra protection. The easy to clean (just hose down and brush) carpet surface is bonded to a hi-tech flexible plastic tray ensuring no penetration of material. Available in deep gray only.

Tuner Series Sport pedal sets • Matching dead pedal

LLTEK provides only high quality satin finish pedal sets all manufactured in Germany. Sport pedal set upgrades create a true custom look and improve tactile feedback. All sets are application specific for Audi cars and are not universal. All sets come with raised friction rubber beads. TUNER SERIES logo debossed. Specify manual or Tiptronic®. Matching dead pedal sold separately.

LLTEK TUNER SERIES

HID conversion program for A6 cars:

All Audi A6 (4B) cars delivered with standard Halogen bulbs can be quickly upgraded to real HID Xenon status using the "Serious Vision" conversion kit. This is a true DS1 HID upgrade. Bulbs are 5,900°K or greater. A set of ballast and igniters, click together wiring plus ballast supports are provided. Specify H1 upgrade program. Refer to lighting section (pages 50-51) for additional details.

HID Xenon UPGRADE KIT

Identifying A6 facelift - Spot the clues!

In this publication, we often use the terms "pre-facelift" and "with facelift" to identify mid-year minor redesign of a given car. For the A6 (4B) car, the most obvious way to identify the changes is to examine the upper front grill (see pictures).

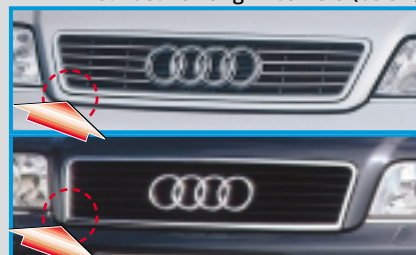

If the lower corners of your grill are rounded, the car is "before" the facelift. Therefore we call it "pre-facelift" or (PF). If the front grill has square lower corners, the car is with the facelift, identified as (WF). **Facelift does not apply to 4.2, 4.2S nor RS6 models.**

In USA and Canada, pre-facelift (PF) would be 2.8 and 2.7T with hidden exhaust tips. In USA and Canada, with facelift (WF) would be 3.0 and 2.7T with exhaust tips protruding thru the rear bumper valance.

Note: Facelift clues apply to sedan and Avant. Front grill on 4.2 widebody car does not fit into the narrow body A6 car.

Pre-facelift (PF)

Rounded lower grill corners (below)

With facelift (WF)

Squared lower grill corners (above)

The S4/S6 (C4) Type 46 1992-1997 (also Audi 100/A6) from LLTEK

THE HISTORY At the urging of many enthusiastic owners of older S4/S6 cars, LLTEK, through its design studio, has created a special "easy-to-install" lower fascia and a set of side skirts specifically for the North American S4/S6 and Audi 100. European styling parts for these cars cannot fit on the North American version of the Audi car. In addition to great looks, which truly breathe new life into this classic S4/S6 and 100/A6 car, the fascia vastly improves internal air flow. Several powerful extra lighting options are also available.

THE INSTALL Installation is totally simplified. When ordered pre-painted the entire install process will take about one hour (plus glue curing time). A simple quick and easy modification of the existing front bumper must be made to install the new part. After removing the 3 lower grills, the 7 center supports must be cut at the top of each support. Then a final cut under the bumper on

Introducing TYPE S46 lower bumper

S6 • A6 (C4) mesh sport grill • TYPE KSGS6.C4

HEADLIGHT UPGRADE TO HID XENON

The Serious Vision 9006 HID true Xenon lighting kit will produce miracle lighting results. This is a very easy to install upgrade providing safety and greatly improved lighting. Night time performance driving with HID becomes an exhilarating experience. For additional lighting information, reference the general lighting section in this catalog (pages 45-57).

For E-code European specification headlamp, call LLTEK.

"Just wanted to say thanks for putting together such a great HID kit for older generation S-cars. The HID's make a world of difference on this car. This has been one of the best upgrades I've made yet. I can finally see the road and anything far ahead of me. I was worried the installation would be difficult, but it turned out to be a breeze and a perfect fit to boot. The extra length of the wires allows for a very clean installation inside the fenders behind the signal lamps, I love it! I also wanted to inform you that with your system the ballast does not affect Audi's "Autocheck Lamp System" as I've heard other HID's systems can with this model, the system was truly "plug and play". I can finally say I see the light!"
Cheers, James

AIRFLOW TEST RESULTS A measured volume flow test was conducted to compare the OEM corner air intake flow to the new corner intake on TYPE S46 installed with a 3.5 light. Because the new corner intake on TYPE S46 is larger than the OEM intake and because the new intake has no cross slats, the measured airflow with light is greater than the OEM setup. Therefore, air to the side intercooler or side oil cooler (where applicable) is not hindered. Still LLTEK will offer its three lighting options with three different support positions. Position 1 (default position) is lights at outer corners. Position 2 is at the inside corner in outer air intakes. Position 3 is lights in center air intake at outer corners. Specify position at time of order.

New life for the original A8/S8!

The first generation Audi A8 was a remarkable success story. However, for the A8 enthusiast there was limited exciting aftermarket product for the car. Now LLTEK is providing the first and only levels of a complete international styling upgrade for certain A8 models.

If your A8 is the short wheelbase, LLTEK offers a styling upgrade for the A8 pre-facelift. There is a second front fascia under consideration* for the facelift version of the car producing the near identical look. Side valances are for the short wheelbase (long wheelbase may follow). The add-on rear valance installs easily in place creating a bold statement while pulling away from the pack. Sides and rear fit the facelift short wheelbase car.

Other nice options are TUNER SERIES polished satin pedals plus footrest. If your car does not have HID lighting, the Serious Vision real Xenon upgrade kit will produce stunning factory performance lighting improving safety as well.

JE DESIGN AMAZING AUDI A8 (D3):

Already the new Audi A8 D3 has taken on "super car" status throughout Europe. Landed as a 2004 model in North America, the car will not only push the competition, it will lead the competition. And LLTEK will offer world class design styling products to transfer the A8 car into the true "exclusive car" category. Believe us, the transformation makes the new A8 look like it's hitting 155 while it's standing still!

The upgrade styling options are for the long wheel base model A8L and short wheelbase model,

creating a true bold and dynamic look. Also under consideration is a special version of the new Retrolux R mirror set. Other nice touches include a genuine stitched leather cell mount (also for PDA or GPS) fixed to the side of the console available in three different leather colors. There is also a "Tuner Series" custom satin brushed aluminum pedal set including a matching Tuner Series foot rest pedal. For performance, look for a custom A8 air induction kit plus uniquely designed replacement sport mufflers with true deep tone sound for use with the factory rear valance. When the aero styling kit is installed, LLTEK will offer an alternate upgrade set of rear sport exhausts with a true quad look. These oversize highly polished quad tips are 100 mm each (can you say 4 inches per tip). Under consideration is a complete exhaust system with and without optional twin downpipes.

The product line for the new A8, S8 and RS8 will continue to evolve. Stay tuned and call LLTEK for the latest upgrades.
